Method overloading vs method overriding

	Compile time poly or static binding or early binding	**Run time poly or binding or late bi**
	call to method is decided at compile time	call to method is decided a
	by using **method overloading** we achieve the CTP	by using **method overridin** RTP
	method overloading happens in the same class	method overriding happen child class
What it is ?	defining the method with same name but differing in the method signature[no. of param or type of param]in the same class	defining the method in the the same name, same para same return type or less re super class method
return type considered	No	Yes
static methods	we can overload	we cant override
private methods	we can overload	we cant override
final methods	we can overload	we cant override
constructor	we can overload	we cant override

dynamic nding
t run time
g we achieve the
s in the parent
e subclass with meters and estrictive as of
